

GLASS & METAL SYSTEMS

Combinations of glass panels with aluminum flat panels are commonly referred to as 1/3 or 2/3 systems. These systems are the most popular options for retrofit applications and rental properties. Aluminum flat panels provide privacy while glass components increase visibility and transmission of natural light where desired. In this way, the ratio of aluminum to glass can be adjusted to meet the needs of individual projects.

ALUGUARD offers systems with a wide range of tints, shades and specialty glass designs to cater to the unique needs of your project.

Our systems provide the flexibility of placing the glass infill between, inside or outside posts. The half round top rail reduces snow and water buildup while offering improved graspability. PVC gaskets in the top and bottom channels prevent moving, rattling, and bending of the glass. Bird friendly glass is available upon request.

STANDARD GLASS

- Clear
- Light gray
- Bronze

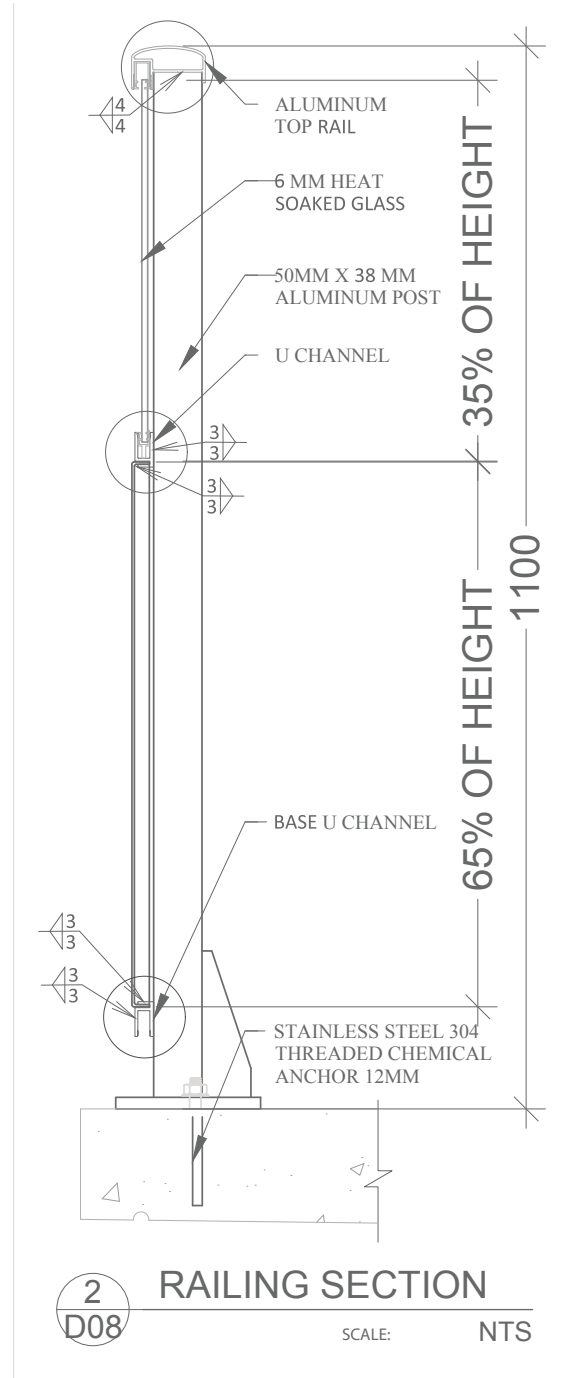

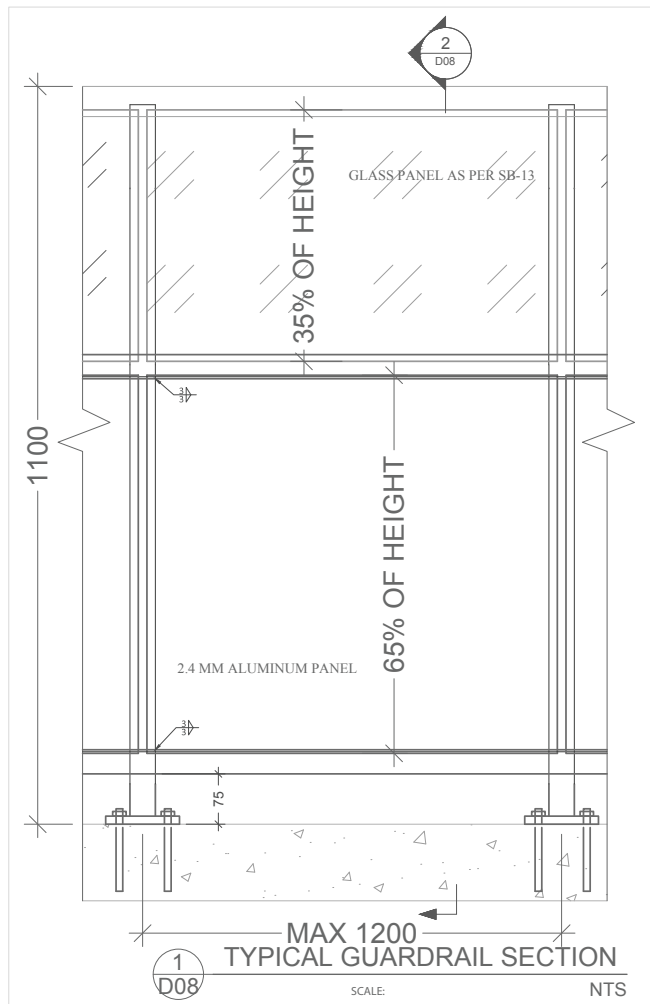

PREMIUM GLASS

- Supergray
- Frosted
- Laminated
- Other specialty colors upon request
- Bird friendly glass upon request

METAL OPTIONS

- Flat
- Corrugated
